tetrachloroethylene, 1,1-dichloroethane, dichloroethylene, benzene, 1,1,-trichloroethane, as well as other organics commonly found in paint wastes and organic solvents used by industry.

As part of their solvent reclamation operations, Fisher-Calo produced a still bottom waste which was accumulated in 55 gallon drums. From previous investigations conducted at the Fisher-Calo facility, it was determined that these wastes were stored, buried, dumped, or spilled at various locations at the One-Line and Two-Line facilities. In the course of its operations, approximately 700 to 1,000 drums were received per month at these facilities. Of these, less than one percent were drums containing cyanide. An exact number and quantity of wastes as delivered, processed and/or disposed of at the facility is unavailable. Many of these waste drums were destroyed in the March 1978 fire which occurred at the One-Line facility. Areas of known or suspected disposal by dumping and/or burial are shown in Figures 1.2-1 and 1.2-2 (Volume II).

#### 1.2.2 CURRENT SITUATION

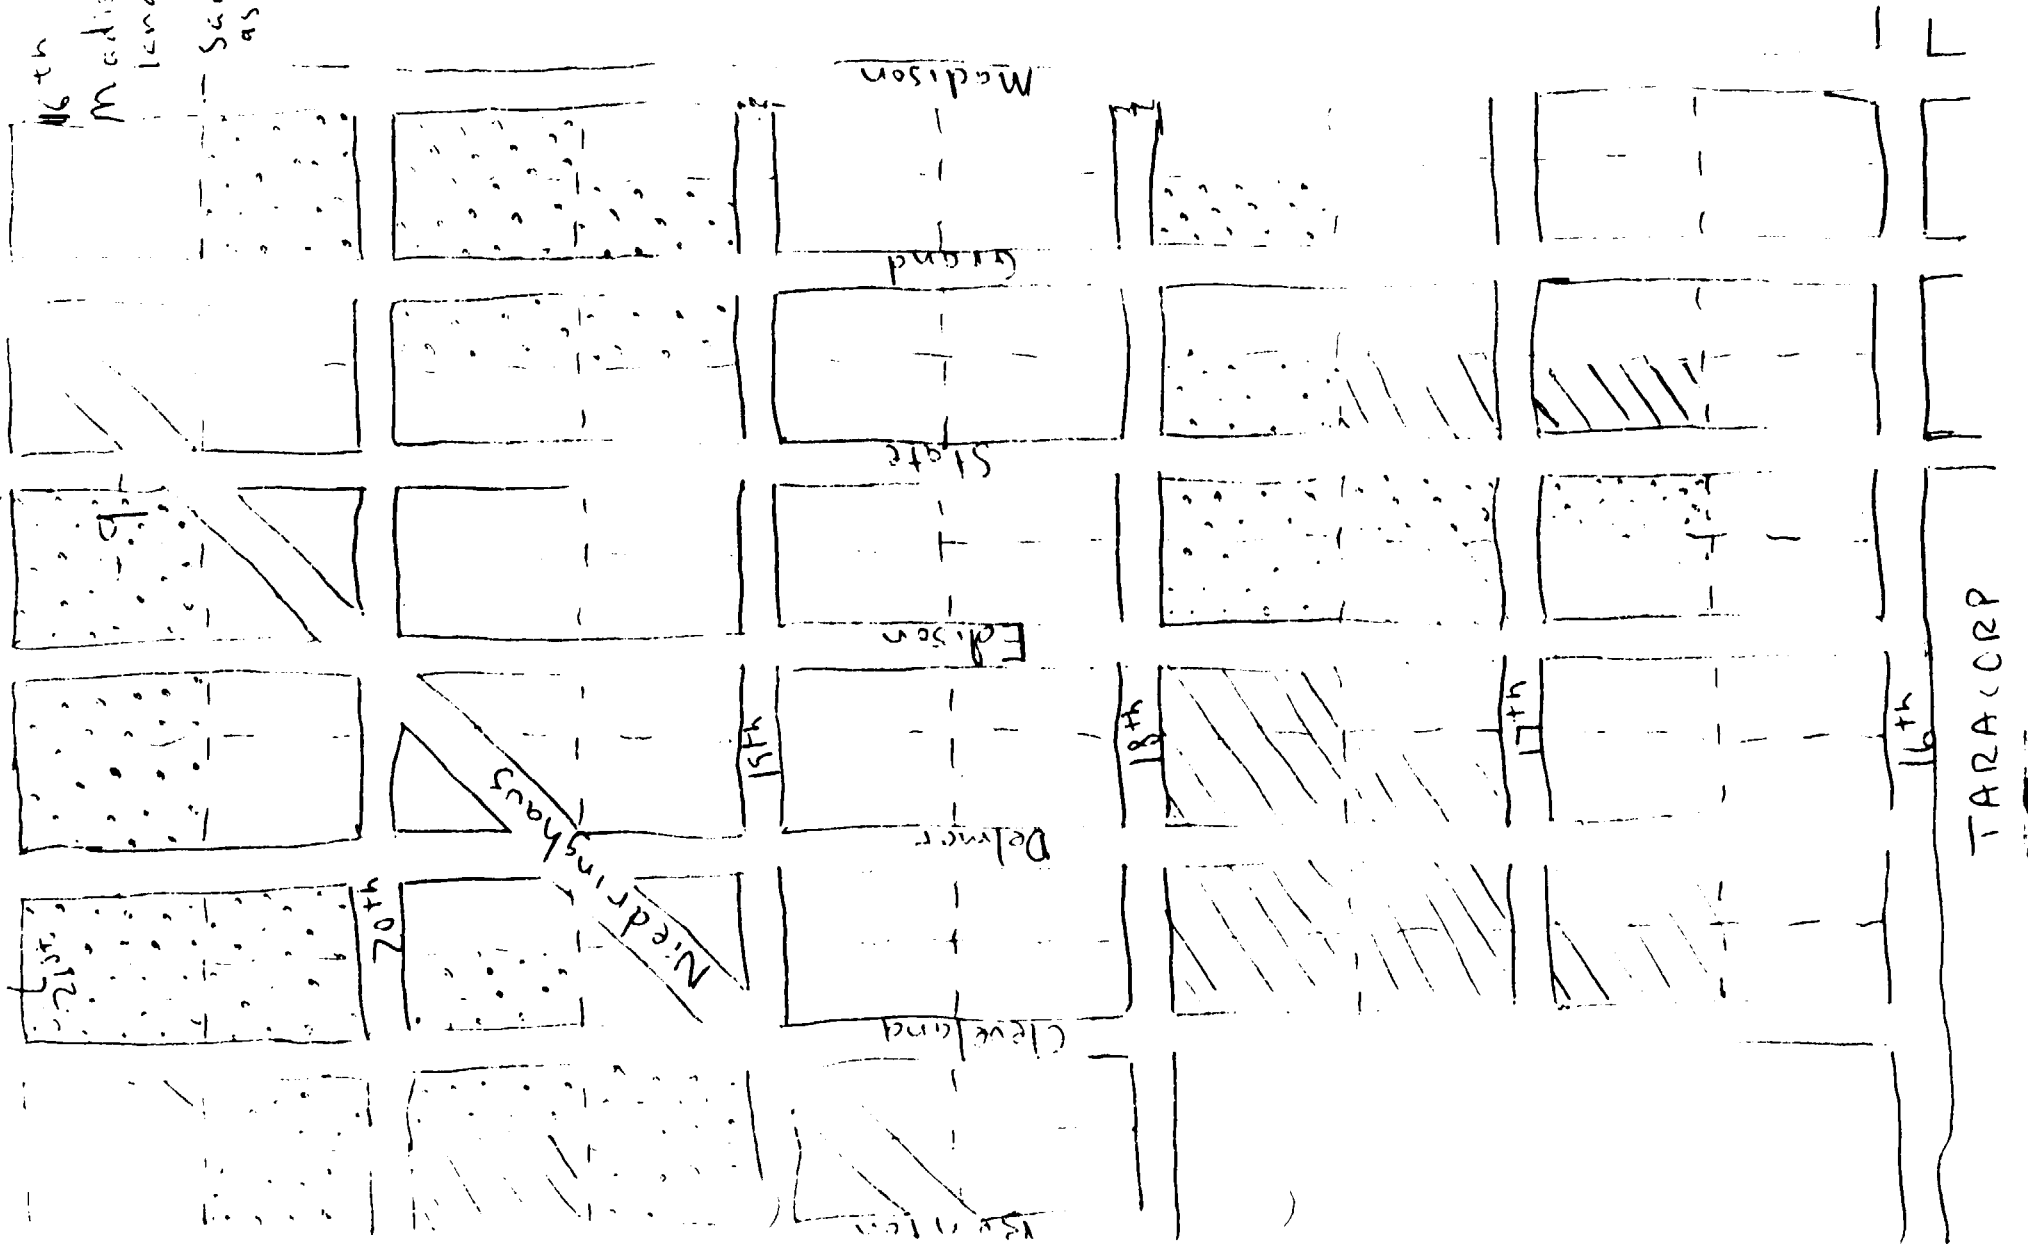

The Fisher-Calo Chemical solvent reclamation facilities ceased operation in January 1985 when Fisher-Calo Industries divested itself from its various divisions. In February 1985, Fisher-Calo filed for protection in the United States Bankruptcy Court of Northern Illinois under Chapter 11.

No new waste materials were received at the facility since 1981. However, drummed wastes and tanks containing wastes are still being stored at both the north and south sections of the Two-Line facility. Some solid waste and drummed waste materials are also still being stored at the One-Line facility.

The Fisher-Calo properties are presently occupied by several independent industrial companies which are actively doing business. A map showing the current site facilities is shown in Volume II, Appendix A, Figure 1.2-3. The Fisher-Calo properties located at the south end of One-Line Road were

as p. 8

three (3) selected monitoring wells to determine if the contaminant concentration would decrease with time. This was based upon the FIT report which stated that the contaminant levels should exhibit a steady decline if the entire source of contamination had been removed. Following several years of monitoring, it became apparent that the contaminant levels had not decreased in the selected monitoring wells, thereby suggesting the continued presence of a contamination source. In April 1985, the USEPA issued a Work Assignment to the REM II Contractor, CDM, to conduct and perform a Remedial Investigation/Feasibility Study at the Fisher-Calo site. A Work Plan detailing the proposed RI/FS activities for the site was approved by the USEPA in July 1986.

In December 1986, the USEPA requested that the study area for the RI/FS be expanded to include the areas identified as Wallace Warehouse, the Drum Storage/Fire Area; an old disposal area at the eastern perimeter in the southern section of the Two-Line Facility; an old disposal area on Space Leasing property located north of Hupp Road, approximately 1 mile east of FCC Two-Line Facility; suspected areas of waste disposal from previous property owners; and the miscellaneous drums, tanks, containers, and area of visibly stressed vegetation located throughout the site and on adjacent properties on One-Line Road. A comprehensive hydrogeological characterization of the site vicinity and additional geophysical studies were also included in the expanded scope of work, so that the RI/FS objectives could be met.

Phase I RI activities began in May 1987 and continued until August 31, 1987 when an arson fire at the Fisher-Calo site trailer halted site investigation activities. Phase II activities were conducted from May until November 1988.

ILLINOIS ENVIRONMENTAL PROTECTION AGENCY

MEMORANDUM

TO: DIVISION FILE, S. REGION, TERRY MYERS, BRAD BRADLEY,

DATE: 7/26/89

FROM: DAVE WEBB  
KEN MILLER

☐ Information only

SUBJECT: DOOR-TO-DOOR PRIVATE WELL SURVEY

☐ Response requested

L1190400007 MADISON CO  
TARACORP

SUPERFUND/HRS

ATTACHED IS A SURVEY FORM COMPLETED BY DAVE WEBB  
SUBSEQUENT TO OUR JULY 12 SURVEY. DURING THE INITIAL  
SURVEY A WELL WAS REPORTED TO EXIST AT 1425 GRAND  
BUT THE OWNER WAS NOT HOME SO DAVE WENT BACK TO  
VERIFY ITS EXISTENCE.

MEMORANDUM

DATE: July 18, 1989  
TO: Division File  
FROM: Ken Miller *KMM*  
SUBJECT: Door To Door Private Well Survey  
L1150400007 Madison County  
Taracorp Superfund/Technical Reports

On July 12, 1989, I participated in a survey to identify private wells within one mile downgradient of the site. The purpose also included determining the use of these private wells and determining the use of other wells in the same area which O'Brien and Gere listed in Table 1 of their RI report.

I met with Brad Bradley - USEPA and Dave Webb - IDPH and we determined that, in the area of concern, there are two residential areas and six wells from Table 1.

Residential Areas

1. An area in North Venice bounded by Meridocia, Salveter, Rogan and College Streets.
2. An area in Granite City bounded by State, Grand, 14th and 15th Streets.

Wells From Table 1

4, 5, 6, 27, 28, 29

Dave Webb and I canvassed the two residential areas and Well 29 while Brad Bradley determined information on Wells 4, 5, 6, 27 and 28.

In residential area number 1, no wells were found to exist except at 540 Meridocia where a 6-8 inch open PVC pipe extends into the ground about 10-15 feet and has a 2-3 foot stick up.

Well number 29 is apparently the Rainey Well located on the property of Spectralite Consortium, Inc. (SCI), which has not been used for 20 years. There are also monitor wells on the SCI property which were installed by Consolidated Aluminum prior to their transfer of the property to SCI.

Page 2

In residential area number 2, no wells were identified except that a couple of residents indicated that there is a well at the 1425 Grand property. The owner of this property was not home and the person who was interviewed knew nothing about the well.

At several houses no one was home during the survey and other houses appeared to be vacant. The following items are attached: figures showing the areas of concern, the interview forms and a list of the houses where no interview was obtained.
